Explain how to use each of the wildcards (*, ?, and [])

- `*` = matches 0 to any numbers of characters for example `ls ~/Downloads/*.png` Example = `ls &.txt` will match all the files that end in .txt regrdless of the size of the file name.
- `?` = matches 1 character for an example `ls ~/Downloads/f?ll.sh`
- `[]` = matches 1 character from a set for an example `ls ~/Downloads/f[0-9]ll.sh`

Explain how to use brace expansion ({})

- Used to generate arbitrary strings by specifying multiple options within curly braces `{}`. it stores multiple output in one brace expansion.
- Example = `echo {1,2,3,4}`
